BioBalance

Next-Gen for young ruminants

BioBalance

BioBalance Next-Gen is a liquid blend of postbiotics, and natural plant extracts designed to supply nutrients and metabolites to the Gastro-lntestinal tract and the micro-organisms that inhabit it. It provides bioactive compounds that increase metabolic activity, enhance intake and growth rates, and improve young ruminants' health and immunity.

Dosage:

Calves	**20ml / day for 28 days**
Lambs	**4ml / day for 28 days**

It can be fed up to 40ml/ head/day for calves recovering from illness or veterinary treatment.

Available in:

1Ltr **10Ltr** **20Ltr**

Science Based Results:

Gut Health Support
Promotes optimal rumen and intestinal development, ensuring better nutrient absorption and digestive health in livestock.

Enhanced Feed Efficiency
Maximises nutrient uptake from feed, ensuring better weight gain and productivity while reducing the cost of production per animal.

Boosted Immune Function
Strengthens the immune system, helping animals fight infections and stress, resulting in healthier herds and reduced veterinary costs.

Sustainability Focus
Reduces the need for antibiotics, supporting farmers in meeting sustainability goals and regulatory requirements for antibiotic-free farming.

Supports Early Development
Accelerates rumen growth and intestinal efficiency, enabling a smoother transition to solid feed for young animals, ensuring long-term health.

Improved Growth Performance
Boosts weight gain and accelerates animal development, helping livestock reach their full potential faster and increasing farm productivity.

Cost-effective solution
Improves feed efficiency, leading to better growth rates with reduced feed costs, boosting overall farm profitability.

Reduced Disease Incidence
Helps reduce common health issues such as diarrhoea and respiratory problems, improving overall animal welfare and reducing the need for medical interventions which have major cost and labour implications.

Suitable for:

- Dairy and beef systems
- Once-a-day, twice-a-day or ad-libitum feeding regimes

Bucket, machine or automatic/computerised feeding systems

BioBalance

Benefits:

- **Improved intestinal development:**
  Young ruminants reveiving BioBalance have an improved gut structure with a greater surface area for absorption of nutrients.

- **Improved Microbiome:**
  BioBalance helps to create a positive environment throughout the gastro intestinal tract, allowing beneficial microbes to thrive while inhibiting pathogenic challenges.

- **Rumen Development:**
  BioBalance facilitates rapid rumen maturation, enhancing digestion and supporting the transition from liquid to solid feed (weaning).

- **Increased Starter Feed Intake:**
  BioBalance Next-Gen promotes increased intakes of solid feed at an earlier age. supporting improved growth rates and a smooth transition to solid feed.

- **Improved Growth:**
  A healthier gut structure, coupled with larger, healthier villi in the gut allows for increased nutrient absorption (efficiency) when combined with increased feed intake and accelerated rumen development provides the necessary resources and absorptive capacity to grow quickly and fulfil their potential.

- **Healthier calves:**
  BioBalance Next-Gen Supports immune function and response against various pathogens, contributing to a more resilient animal, and herd.

Key Ingredients:

BioBalance is powered by the latest innovations in postbiotic technology. By leveraging the benefits of the fermentation products of specific yeasts coupled with a cutting edge blend of plant extracts, BioBalance provides essential nutrients and bioactive compounds that improve gut health, feed efficiency, and overall animal performance.

Mode of Action:

BioBalance Next-Gen's success stems from its comprehensive, multi-layered approach targeting core aspects of gut health and rumen development:

Microbial Population Shift:
Postbiotics help adjust the rumen's microbial profile to support beneficial bacteria like fibrolytic and lactate-consuming types, boosting digestion and nutrient use. This modulation enhances feed breakdown and fosters a healthier rumen environment.

pH Stabilisation:
Ensures optimal rumen pH to prevent acidosis, promoting a balanced setting for microbial protein production and VFA synthesis—key energy sources that drive growth and metabolic health.

Digestive Efficiency:
Improves feed digestibility beyond the rumen, enabling better nutrient absorption crucial for growth. This supports quicker development and a smoother transition from milk to solid feed.

Energy and Palatability:
Includes natural mono propylene glycol and a blend of sugars and oligosaccharides to maintain stable blood sugar and foster healthy ruminal flora, providing consistent energy to young animals.

Nutrient Supply: Supplies essential bioactive compounds to boost metabolic activity, enhance growth, and strengthen immunity, equipping young ruminants to better withstand weaning and environmental stressors.

BioBalance

The Future of Sustainable Pig Farming Starts with BioBalance.

Available in 10 & 20 litre

Why Choose BioBalance Swine?

BioBalance Swine is a liquid feed additive designed to deliver exceptional performance in sows, piglets, and growers. It drives growth, enhances gut health, and fortifies immune resilience throughout all production stages. With the continuous challenges of achieving growth efficiency, disease management, and antibiotic-free production, reliable nutritional solutions are more critical than ever. BioBalance Swine harnesses the power of Saccharomyces cerevisiae fermentation products (SCFPs) combined with a proprietary phytogenic blend to ensure optimal health and productivity in pigs.

Supporting Natural Gut Health and Immunity

- BioBalance Swine accelerates the recovery process, helping animals bounce back quickly from health challenges and environmental stressors.
- Ensures that animals who experience setbacks, such as feed changes or health challenges, can quickly regain their growth potential.
- After exposure to pathogens, BioBalance Swine supports the immune system, allowing animals to resume optimal performance without prolonged recovery time.
- Studies show BioBalance can reduce harmful pathogens by up to 30%, helping to lower the overall disease burden within the herd and supporting a healthier, more productive population.
- By increasing villus height and crypt depth, BioBalance ensures optimal nutrient absorption, which directly supports enhanced growth and overall pig health

Supports Antibiotic-Free Goals and Enhances Welfare

- With BioBalance, producers can achieve high performance without antibiotics, aligning with consumer demand for sustainable, antibiotic-free meat.
- BioBalance fosters a stable gut environment, reducing digestive disturbances and promoting the proliferation of beneficial bacteria.
- BioBalance's targeted formulation decreases digestive upsets and inflammation, ensuring animals are healthier, more comfortable, and more productive.
- By supporting robust immune function, BioBalance promotes faster overall recovery, reducing fever duration and minimising performance dips in challenged pigs.

Drives Growth and Performance

- By optimising nutrient absorption, BioBalance helps each kilogram of feed go further, boosting growth while reducing feed costs.
- In stressful or challenging environments, BioBalance enhances growth rates, delivering a significant performance boost for high-demand production systems.
- Faster time to market and enhanced growth performance translate directly to profitability, with BioBalance providing a competitive edge.
- Healthier pigs require fewer interventions, cutting veterinary expenses and reducing production downtime.
- With lower mortality and culling rates, BioBalance helps maximise herd productivity and provides a stable return on investment.

Transform your farm's performance today with BioBalance—the natural solution for modern pig farming.

Feeding Programmes

- Sows: 30 ml/day for at least 2 weeks prior to parturition to support gut health, colostrum quality, and piglet vitality.
- Piglets: 30 ml/day as they approach weaning to aid in digestive health, appetite, and a smooth transition to solid feed.
- Weaners/Growers: 15 ml/day during stressful periods or recovery from illness to support immune health, feed efficiency, and growth.

  Note: Double the dose during periods of stress or illness to provide enhanced support for immune health, recovery, and growth.

Mode of Action

The effectiveness of BioBalance comes from its SCFPs and phytogenic blend working synergistically to:

- SCFPs promote the growth of beneficial bacteria such as Lactobacillus and Bifidobacterium, which are crucial for a stable and healthy digestive system. A diverse and balanced gut microbiome supports digestion and immune responses.
- BioBalance enhances intestinal morphology, increasing villus height and crypt depth, which supports more efficient nutrient uptake and better growth rates. Improved gut architecture ensures maximal contact between nutrients and absorptive surfaces.
- Bioactive compounds modulate cytokine production, supporting balanced immune activation and reducing chronic inflammation. By promoting a non-overactive immune system, BioBalance helps conserve energy for growth and production, maintaining health and productivity throughout all growth phases.
- BioBalance's role extends beyond general nutritional benefits by providing resilience against common environmental stressors and pathogens. By reinforcing gut barrier function and promoting microbial balance, pigs are better equipped to face stressors such as temperature fluctuations, dietary changes, and pathogen exposure

Nursery Pigs: Growth and Immune Support

- Promotes consistent growth during weaning, reducing stress and health challenges, shown by an improved average daily gain (ADG) in SCFP-supplemented pigs.
- Enhances nutrient absorption and gut health, decreasing post-weaning diarrhoea cases, supported by Weedman et al., 2011, highlighting increased beneficial bacteria.
- Proven in field trials to sustain weight gain under pathogenic exposure (Price et al., 2010).

Growing Pigs: Steady Growth and Gut Health

- Improves feed conversion ratios and maintains growth during diet transitions, supported by research on SCFPs' role in boosting nutrient digestibility.
- Supports microbial balance and optimises enzyme activity for nutrient uptake (Kiarie et al., 2011).
- Minimises growth setbacks, ensuring smooth dietary progression.

Breeding Pigs: Reproductive Health

- Strengthens immune function during gestation and lactation, backed by Shen et al., 2009, showing elevated immunoglobulin levels.
- Enhances colostrum quality, boosting piglet immunity and survival rates.
- Reduces inflammation, aiding energy conservation for lactation and recovery.

Fattening Pigs: Weight Gain and Efficiency

- Promotes efficient weight gain and continuous feed intake with reduced oxidative stress (Weaver et al., 2014).
- Supports muscle deposition and carcass quality by mitigating stress effects.
- Reduces veterinary needs, lowering costs and improving herd health.

Sustainability and Long-Term Benefits

- Healthier pigs need fewer medical treatments, as shown by long-term studies.
- Improved feed efficiency promotes sustainable farming practices.
- Aligns with eco-friendly production standards for responsible farming.

At Birth

Help Kick-Start a Calf's Life!

"At Birth" is a carefully formulated nutritional supplement designed to provide calves, camels, and foals with a strong start in their first hours of life. Each 30g syringe delivers a potent blend of essential vitamins, minerals, prebiotics, and probiotics, filling nutritional gaps to support the healthy growth and development of newborn animals. This product is ideal for both Dairy and Suckler calves, as well as for camels and foals, especially in situations where colostrum quality may be lower.

- Administer one "At Birth" syringe per animal shortly after birth to provide vital nutrients quickly and easily, with minimal handling.

Key Benefits and Features:

Optimised Calcium Delivery

Contains oligosaccharides (simple sugars and fibres) embedded in a high-energy carrier, which promotes efficient nutrient absorption, allowing newborns to benefit from the supplement immediately.

Supports Gut Health

Includes both prebiotics and probiotics to help establish and maintain a healthy balance of gut bacteria, which supports digestive health and protects against harmful bacteria. Also rich in Omega 3 and Omega 6 fatty acids, which contribute to fertility, brain development, and joint health, offering comprehensive support for a strong start.

Packed with Essential Vitamins

Vitamin A: Provides antioxidant support, helping newborns maintain robust health from day one.

Vitamin D3: Aids in the absorption of calcium and phosphorus, promoting healthy bone growth and structural development.

Aqua Lamb

Available in:

100ml

250ml

Aqua Lamb is a potent probiotic solution designed to enhance the well-being of your lambs. Experience a range of benefits with Aqua Lamb:

Key Benefits and Features:

- Helps support a healthy gut by providing beneficial microorganisms, contributing to better immunity and infection resistance.
- Aids in maintaining energy and glucose levels, reducing the risk of hypoglycemia, acidosis, and diarrhea in young lambs.
- Assists in protecting the gut lining, encouraging the immune system, and fostering a balanced gut microbiome.
- Supports improved nutrient absorption and utilization, promoting growth, development, and increased survival rates.
- Provides essential vitamins A, D, and E to nurture gut health, overall wellness, and safeguard against nutrient deficiencies.

Calcium Action

Available in:

1 Ltr

Uniquely formulated to Help Manage Milk Fever!

Calcium Action is a specially formulated feed supplement that delivers concentrated calcium to support milk fever, providing essential calcium when it's needed most.

Key Benefits and Features:

Optimised Calcium Delivery

Provides a high concentration of calcium to meet increased demands during and after calving or lambing, reducing the risk of milk fever and aiding smooth recovery.

Timed Release for Critical Periods

Formulated to ensure cows and ewes receive essential calcium precisely during the critical pre- and post-birth periods.

Keto-Energy

Available in:

1 Ltr

500ml

Helps to Balance Energy Levels!

Keto-Energy is a high-energy drench that supports ewes and cows during severe energy deficiency (ketosis & twin lamb disease).

Key Benefits and Features:

Supports Rumen Function and Digestion
It contains yeast to stimulate rumen activity and includes prebiotics to strengthen gut health, promoting efficient digestion and nutrient absorption.

Fast-Acting Energy Support
Provides immediate energy for ewes carrying multiple lambs (twin lamb disease) or cows with severe energy deficiency, reducing the risk of ketosis and helping animals stay strong through demanding periods.

Comprehensive Nutritional Support During Stress
Supplies essential vitamins and trace elements to support the animal's resilience.

Solu-E

Available in:

1 Ltr

5 Ltr

2.5 Ltr

Improve Vitamin E And Selenium levels in the body!

Solu-E is combines the antioxidant benefits of Vitamin E and Selenium, designed to promote muscle health, and support reproductive efficiency in livestock. This formula ensures animals receive essential nutrients for optimal growth, vitality, and productivity.

Key Benefits and Features:

Promotes Muscle Health and Growth
Vitamin E and Selenium strengthen muscle fibers, enhancing weight gain and performance for healthier, more productive livestock.

Supports Reproductive Efficiency
Selenium supplementation helps reduce fertility issues, including retained placenta and early embryonic loss, supporting reproductive health in breeding animals.

Addresses Nutritional Deficiencies in Stored Feed
Supplies essential Vitamin E, crucial for livestock fed on stored feeds that may lack adequate levels needed for nervous and muscular health.

ProbiVit-E

Available in:

4kg

30g

10kg

ProbiVit E combines beneficial probiotic bacteria with Vitamin E and is designed for all livestock. It's ideal for supporting digestive health or animals recovering from stress, illness, or veterinary intervention.

Key Benefits and Features:

Supports Gut Health
Increases the beneficial bacteria population, helping maintain a healthy gut environment.

Improves Appetite and Recovery
Aids in appetite stimulation speeds up recovery in stressed or recovering animals, helping them return to optimal health faster.

Versatile Feeding Options
It can be used as a top dress, mixed through feed, or added to milk or water, providing flexible administration based on animal needs.

Stock Boost

Available in:

1 Ltr

5 Ltr

2.5 Ltr

Supporting Livestock performance

Stock Boost is a high-impact drench that combines essential vitamins (A, D, E, and B vitamins) and chelated trace elements (Copper, Zinc, Manganese, Iodine, Selenium, and Cobalt) to support cattle during high-stress, high-demand periods.

Key Benefits and Features:

Promotes Fertility and Reproductive Health
By addressing nutrient deficiencies, Stock Boost supports reproductive success, healthier offspring, and quicker recovery in cows and heifers, with minerals like Selenium and Iodine aiding fertility and reducing associated risks.

Supports Growth and Development
Stock Boost helps young stock reach full growth potential, resulting in significant improvements in weight gain, muscle development, and overall size, thanks to a balanced mix of vitamins and minerals.

Nutritional Support During Stress
Stock Boost provides essential nutrients for cattle in high-demand situations like peak milk production, transport, and seasonal changes, ensuring steady performance and health.

Improves Colostrum Quality and Calf Health
Vitamins A, D, and E enhance colostrum quality, giving calves the nutrients they need for robust early development.

Comprehensive Mineral Support
With chelated minerals for enhanced absorption, Stock Boost supports bone growth, muscle health, and appetite, aiding in tissue repair and overall well-being.

ClovenExtra

Available in:

10 Ltr

600ml

Helping to maintain Healthy Hooves!

ClovenExtra is a footbath and spray designed to support better hoof health, help prevent common hoof issues such as lameness and dermatitis. With antimicrobial properties, it provides a sustainable approach to hoof care for livestock.

Key Benefits and Features:

Enhanced Hoof Repair
Infused with zinc to accelerate the natural healing process of damaged hoof skin and reduce inflammation commonly associated with hoof problems.

Pathogen Defense
Contains citric acid to create a low-pH environment, inhibiting pathogen growth and providing an extra layer of protection against bacterial and fungal infections.

Comprehensive Hoof Care
ClovenExtra has astringent, softening, and protective properties to soothe wounds, reinforce hoof structures, and reduce discomfort in deeper tissues.

SlurryCare

Available in:

1 kg

3 kg

10 kg

SlurryCare is an organic-approved slurry treatment specifically formulated to enrich your slurry with a carefully balanced blend of beneficial bacteria and enzymes.

Key Benefits and Features:

- **SlurryCare** improves the fertiliser and nitrogen values of slurry by up to 21% as its combination of bacteria and enzymes break down organic matter in slurry.
- **SlurryCare** reduces Ammonia in the slurry by 93% over 150 days. Aiding the growth of a healthy earthworm population which, in turn, loosens and aerates the soil, resulting in:
  - Improved soil structure and drainage
  - Improved farm productivity
  - Increased nutrient availability
  - Improved slurry consistency
- Improves the consistency and safety of the slurry, reducing gases, blockages, and odours to reduce agitation time, labour costs and other inputs (e.g diesel)

Cobalt B12

Available in:

1 Ltr

5 Ltr

2.5 Ltr

Cobalt B12 is a highly concentrated oral solution for cattle and sheep, formulated with **Selenium, vitamin B12, and B1.** It provides a rapid and effective dose of vital nutrients to support optimal growth.

Key Benefits and Features:

- **Cobalt B12** is a water-soluble, palatable oral drench designed explicitly for animals where Cobalt deficiency is a risk. Cobalt B12 is a glucose-based product that allows easier drenching and solubility in drinking water and is palatable as a top dress on feed.
- Cobalt B12 is formulated with Cobalt Acetate, the most available form of Oral Cobalt supplementation on the market, up to twice the bioavailability of other sources such as Cobalt Sulphate or Chloride.
- Mature ruminants can produce vitamin B12 (from Cobalt); however, young ruminants (Lambs, Calves) and animals kept in Cobalt deficient areas will benefit from regular Cobalt Supplementation with Cobalt 812. Regular supplementation with Cobalt B12 helps ensure thriving young calves and lambs, as Vitamin B12 plays a vital role in energy metabolism.
- Lambs treated with Cobalt tend to have increased weight at drafting, carcass weight, and a higher % of lambs finished earlier (Keady et al., 2017)
- Enhances rumen function to help avoid ill thrift and pining in Sheep and cattle.

Ultra Mint

Available in:

500ml

2.5 Ltr

Helping to maintain Healthy Udders!

Ultra-Mint is an udder cream which acts as an aid to maintain the condition of cow's udders

Key Benefits and Features:

- The formulation of high-quality Indian peppermint oil supports the cow's natural defence system
- The emulsion cream allows easy massage and absorption, creating a natural soothing effect without a greasy deposit

Sheep Boost

Available in:

1 Ltr | 5 Ltr | 2.5 Ltr

Sheep Boost is a concentrated supplement providing essential nutrients to enhance fertility and performance in sheep, rams, and lambs.

Key Benefits and Features:

Enhanced Fertility, Health, & Growth Support:
Sheep Boost delivers essential minerals and nutrients that support reproductive health, resilience, performance and growth in both ewes and lambs, enhancing flock productivity and profitability.

Efficient Nutrient Absorption:
With an innovative carrier system, Sheep Boost maximises nutrient bioavailability, allowing critical minerals, vitamins, and trace elements to be efficiently absorbed and utilised. This optimises nutritional uptake, contributing directly to the health and performance of each animal.

Comprehensive Health Support:
A robust blend of essential vitamins and minerals works to support organ function, skin integrity, hoof strength, and fleece quality. This holistic nutritional support promotes vitality and keeps the flock thriving throughout the year.

Copper-Free Formula: Safe for copper-sensitive breeds.

Stockline With Copper

Available in:

1 Ltr | 5 Ltr | 2.5 Ltr

Stockline with Copper is a highly bioavailable oral drench, designed for all classes of livestock, especially suited to copper tolerant sheep to be used as a conditioning drench in the lead-up to tupping, mid-pregnancy and post lambing and cattle as conditioning drench throughout their life cycle.

Key Benefits and Features:

MACC Chelates:
Stockline incorporates MACC (Metal Amino Acid Chelates), which improve the bioavailability of trace elements, helping ensure livestock receive the necessary nutrients efficiently.

Essential Vitamins and Trace Elements:
Contains high levels of vitamins A, E, D3, and B1 to support immune function, energy metabolism, and overall health, as well as protected Copper and Zinc for bone development and improved coat, hoof, and hair quality.

Fish Oils:
Enriched with Omega 3 & 6 from fish oils, which contribute to general well-being, including joint health and brain function.

Supreme Finisher

Available in:

4 kg | 10 kg

Supreme Finisher is a specialised feed supplement combining **Selenium, Vitamin E, Lysine, and Methionine** to promote optimal health, growth, and peak performance in livestock.

Key Benefits and Features:

Antioxidant Support:
Selenium & Vitamin E aid metabolic function, enhance immunity, and support muscle health, ensuring animals maintain peak condition during demanding periods.

Increased Performance:
Lysine and Methionine are critical amino acids that foster robust growth, optimal weight gain, and efficient development, providing the foundation for conditioning and market success. These amino acids also improve muscle and tissue development, enhancing feed efficiency and performance before shows or sales.

Twin Plus

Available in:

1 Ltr | 5 Ltr | 2.5 Ltr

Twin Plus is a nutritional drench to support ewes during the pre-tupping and pre-lambing stages.

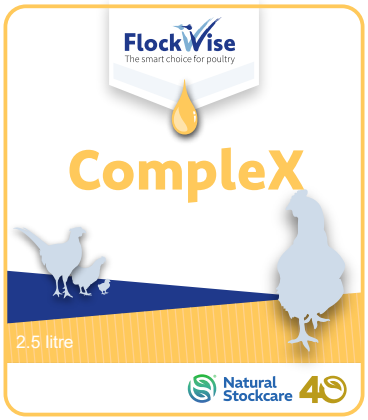

Key Benefits and Features:

Support for Pregnancy and Breeding:
Twin Plus provides vitamins and minerals to improve fertility conception rates and helps prevent twin lamb disease. It contains 20 essential nutrients for health and performance, lamb vitality, and ewe recovery.
The formulation includes an energy boost for ewes before tupping and during pre- and post-lambing stages, ensuring ewes maintain their condition during critical periods.

Nutritional Balance:
It is bolstered with vitamins such as B and E, which support immune function and reproductive health, and selenium, which plays a crucial role in antioxidant defence.

Enhanced Energy Growth:
With B vitamins that enhance nutrient conversion into energy, Twin Plus supports stable blood glucose levels and optimal lamb growth, especially in ewes carrying multiple lambs. The high-energy blend of glucose and propylene glycol further promotes healthy development, ensuring strong growth for both ewes and lambs.

FlockWise
The smart choice for poultry

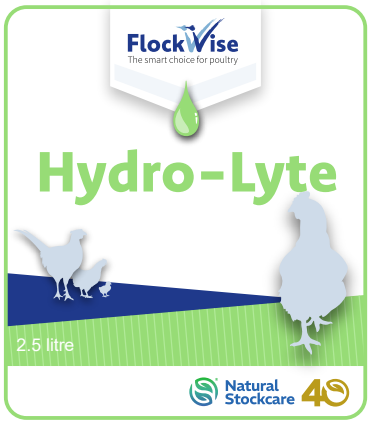

Key Ingredients: A blend of essential vitamins, trace minerals, antioxidants, and other high-impact nutrients, each chosen to promote a robust immune system and optimal growth.

Flockwise CompleX: Advanced, All-Inclusive Nutrition

Flockwise CompleX is an expertly crafted, multi-layered nutritional solution that delivers everything poultry needs to thrive. Designed to be more than just a vitamin supplement, CompleX combines essential nutrients, minerals, and antioxidants to support immune strength, promote growth, and enhance resilience throughout all life stages.

Key Benefits:

- **Comprehensive Nutrient Profile:** CompleX supplies a full spectrum of vital nutrients that help bridge gaps left by standard feed, ensuring steady development, metabolic health, and consistent performance.
- **Immune Fortification:** Packed with key ingredients that bolster the immune system, CompleX strengthens natural defences, helping poultry manage stress and resist common challenges associated with intensive farming.
- **Resilience and Vitality:** CompleX is formulated to support birds during high-demand periods, helping maintain health, growth, and productivity in the face of environmental pressures, feed transitions, or production intensity.

Key Ingredients:Betaine, Proviox, sodium chloride, potassium, vitamin C.

Flockwise HydroLyte: Hydration and Electrolyte Balance

Product Overview: Flockwise HydroLyte is a highly specialised supplement designed to maintain hydration and electrolyte balance in poultry, particularly during periods of high temperatures, transportation, or restricted water access. By encouraging consistent water intake and supporting natural cooling processes, Flockwise HydroLyte reduces dehydration risks, helping ensure steady growth and digestive health.

Key Benefits:

- **Enhanced Hydration:** Supplies essential ionic salts and nutrients that support metabolic function, sustain blood pH, and enhance water retention, which is critical during heat stress.
- **Electrolyte Balance:** Helps maintain digestive health and promotes efficient nutrient absorption, which is vital during high temperatures or dehydration risks.
- **Heat Stress Resilience:** Formulated to be used proactively before and during temperature spikes, Flockwise HydroLyte supports birds in maintaining healthy feed intake while reducing heat-related stress behaviours.

Key Ingredients: Vitamins D3, B, K, C, 25-hydroxy vitamin D3, medium-chain fatty acids.

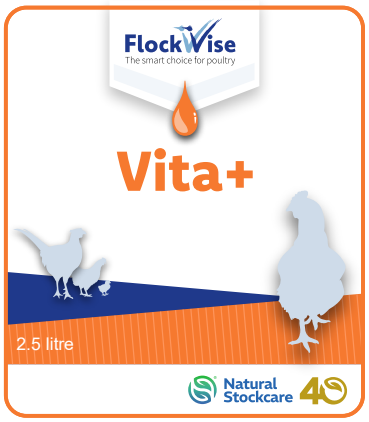

Flockwise D+: Foundational Support for Bone Strength and Mobility

Product Overview: Flockwise D+ is a specialised supplement designed to support bone strength and mobility in fast-growing poultry. With a unique blend of vitamins, including 25-hydroxy vitamin D3, Flockwise D+ helps ensure that birds develop strong skeletal structures needed for healthy growth, feeding, and activity, reducing the risk of leg issues.

Key Benefits:

- **Enhanced Bone Strength:** Supports bone calcification and structural integrity, helping reduce leg issues and ensuring birds develop a robust skeletal system.
- **Growth and Mobility:** The targeted nutrients in D+ promote activity, feeding habits, and consistent growth, contributing to overall flock health.
- **Egg and Shell Quality:** Helps balance calcium and phosphorus levels, supporting bone development and enhancing shell quality in layers, reducing shell breakage.

FlockWise
The smart choice for poultry

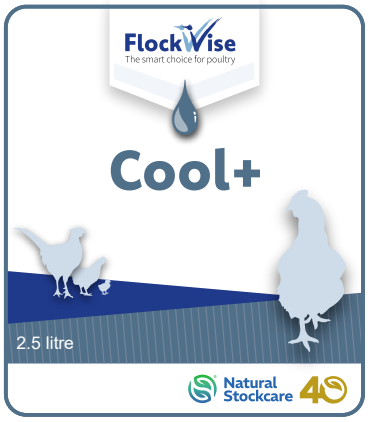

Key Ingredients: Essential vitamins, antioxidants, and other key nutrients.

Flockwise Vita+: Comprehensive Vitamin and Immune Support

Flockwise Vita+ is a complete vitamin supplement that helps strengthen poultry health and immune function, particularly during feed changes, stress, or intensive production periods. Formulated to provide essential vitamins, Vita+ ensures metabolic health, growth, and resilience, helping birds perform at their best even under challenging conditions.

Key Benefits:

- **Enhanced Nutrient Intake:** Delivers key vitamins that may be lacking during feed variations or periods of reduced intake, ensuring consistent nutritional support and healthy growth.
- **Immune Function:** Reinforces the immune system, helping reduce the impact of stress and supporting resilience against common production challenges.
- **Stress and Growth Resilience:** Supplies additional vitamins during high-demand periods, sustaining bird health and growth even during environmental or production-related stress.

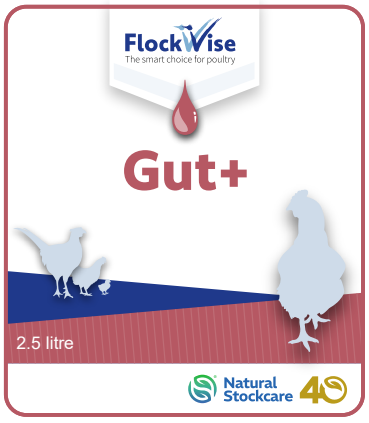

Key ingredients: Contains a balanced blend of key ingredients including betaine, Proviox, sodium chloride, potassium, and vitamin C.

Flockwise Cool+: Hydration and Heat Resilience for Poultry

Flockwise Cool+ is a liquid supplement developed to help poultry stay hydrated and maintain electrolyte balance during periods of heat stress, transport, or limited water availability. This supplement encourages water intake and natural cooling, reducing the risk of heat stress to keep birds healthy and feeding consistently.

Key Benefits:

- **Optimal Hydration:** Supplies essential ionic salts and nutrients that sustain blood pH, metabolic function, and efficient water absorption. Especially beneficial for day-old chicks, giving them a strong start.
- **Electrolyte Stability:** Maintains balanced electrolyte levels, supporting growth and digestive health during high temperatures.
- **Heat Resilience:** Designed for use during temperature spikes above 25°C to encourage water intake and mitigate stress behaviours like panting and wing spreading.
- **Digestive Support:** Helps stabilise digestion and ensures nutrient availability, supporting bird productivity even during heat stress.

Key Ingredients: Essential oils, plant extracts, sorbitol, choline, methionine, betaine.

Flockwise Gut+: Support for Digestion and Liver Health

Flockwise Gut+ is a liquid supplement designed to support poultry during critical growth phases, stress, or reduced feed intake. It optimises digestion and liver function to maximise feed utilisation, ensuring consistent energy, growth, and flock performance, even during tough conditions.

Core Benefits:

- **Digestive Efficiency:** Specially formulated to enhance gut motility, enzyme function, and bile flow, Flockwise Gut+ supports better nutrient absorption, particularly during times when extra digestive support is needed.
- **Balanced Energy & Flock Consistency:** Provides alternative energy sources that help maintain a healthy feed conversion ratio (FCR) without overburdening the liver, promoting flock uniformity and activity.
- **Liver Support:** Reduces liver stress by aiding fat processing and detoxification, making it especially beneficial for layers and fast-growing birds needing efficient nutrient breakdown.

Natural Stockcare

40 YEARS

Trusted by Farmers Since 1984

Tradition, Trust, and Innovation

With over 40 years of experience, Natural Stockcare is known globally for quality and reliability in animal nutrition. From our beginnings as pioneers, we have evolved to meet modern agriculture's needs while staying true to our values. Our dedication to research and innovation ensures our products enhance livestock health and align with sustainable farming practices.

Balancing Tradition and Progress

Founded in Blaydon-on-Tyne, United Kingdom, Natural Stockcare is a family-owned business focused on quality and effectiveness. By blending trust, innovation, and traditional values, we create solutions that meet current needs and anticipate future challenges. Our mission is to reduce antibiotic use while improving animal health and productivity—a commitment evident in every product.

Expertly Crafted, Farm-Tested

Our products are crafted through rigorous research and a commitment to quality, backed by decades of experience. We adhere to GMP+ standards, ensuring the highest levels of quality and safety. Each solution addresses specific livestock challenges by combining the latest research with natural resources to optimise health and productivity.

Deep Roots, Global Reach:

Our team blends decades of experience with the latest research to meet today's farming needs. Strong partnerships with research bodies and agricultural institutions keep us at the forefront of nutritional science. This dedication positions us as trusted partners, ready to support farmers and distributors with innovative solutions contributing to long-term sustainability and profitability.

Your Trusted Partner in Animal Nutrition

Rooted in family tradition, Natural Stockcare has been trusted by farmers for over four decades. We empower farm growth and sustainability with solutions that respect our heritage while embracing the future.

Ready to Grow Together?

Partner with us and distribute our trusted products in your region.

We offer:

Custom Contract Manufacturing
Product Co-Development
Strategic Marketing & Distribution
Bespoke Packaging Solutions

Let's Collaborate!
